Salt - Support #37205

Salt ENC button missing and documentation lacking

Description

According to:
https://docs.theforeman.org/nightly/Managing_Configurations_Salt/index-katello.html#Viewing_ENC_Parameters_managing-configurations-salt

I should have a Salt ENC button on my hosts page. However, I do not see this option anywhere. I am trying to get a host parameter to show up in the pillar data, but it does not.
I have added a test parameter on a host:

Overview	Details	**Parameters**	Puppet	Reports				
Q Find by name	→	Add parameter						1 - 4 of 4 ▼ ‹ ›

Name ↑	Type	Value	Source		
host_packages	string	No value	global	✏	
host_registration_insights	boolean	false	global	✏	
host_registration_remote_execution	boolean	true	global	✏	
test	string	test	host	✏	⋮

1 - 4 of 4 items ▼   « ‹   1   of 1 › »

I have ran salt '*' saltutil.refresh_pillar but alas the parameter does not show up when running salt <minion> pillar.items.

How can I get the Salt ENC button to appear, and why am I not seeing the parameters as pillar data for a minion?

History

#1 - 02/23/2024 03:07 PM - Jeff S

I should note, when running /usr/bin/foreman-node <minion> I do indeed see the parameter. I am just not sure how I actually use it within Salt as the docs are severely lacking.
While calling salt <minion> pillar.items I see in the salt master logs: 2024-02-23 15:18:11,445 [salt.loaded.int.pillar.puppet:27][CRITICAL][1169831] YAML data from /usr/bin/foreman-node failed to parse

#2 - 03/04/2024 03:18 PM - Jeff S

- Priority changed from Normal to High

Is there any way to change the puppet enc button to show the salt enc, like in your documentation?
