Pull request:	https://github.com/theforeman/foreman/pull/10014			

Description

Steps to reproduce:

1. register host from which has non-default domain or which is from different infra, where satellite will know it as full-name
2. Add that domain to satellite, and check all hosts page which shows short-name
3. Then, navigate to Host Details page for it, and check full-name is used in names and breadcrumbs, domain is set none.
