Pull request:	https://github.com/foreman/foreman/pull/10093 , https://github.com/foreman/foreman/pull/10110	
Description Currently <HostsIndex> renders a <TableIndexPage> which renders a {children <Table>} which is actually what has the results.map and renders a <TableComposable>. The effect of this is that you have to go on a wild goose chase through at least 4 files to see what your table rows will render. This needs refactoring, preferably so that the results.map can appear directly in <HostsIndex>.
