<b>Description</b>		
<p>Currently &lt;HostsIndex&gt; renders a &lt;TableIndexPage&gt; which renders a {children    &lt;Table&gt;} which is actually what has the results.map and renders a &lt;TableComposable&gt;.</p> <p>The effect of this is that you have to go on a wild goose chase through at least 4 files to see what your table rows will render. This needs refactoring, preferably so that the results.map can appear directly in &lt;HostsIndex&gt;.</p>
