Description

Any calls to /pulpcore_registry/v2/ lose REMOTE_USER in the headers. This header is necessary to authenticate with Pulp to push container content.

To work around it, I removed every reference to setting / unsetting REMOTE_USER in /etc/httpd/conf.d/05-foreman-ssl.conf and added `RequestHeader set REMOTE_USER "admin"`. Only then did the REMOTE_USER header get sent to Pulp.
