We really want to have such a feature for Katello. And same for Salt. This is especially important for hosts and hostgroups.

I have a working example...

I'd like to add something like this to Foreman:
 https://github.com/stbenjam/foreman/commit/ffc9009a99aa63e2b402ae5f7e8c95f61c7effb5

And the corresponding plugin extensions might look something like this:
 https://github.com/stbenjam/katello/commit/6d5c1a96664e1b3c1b25a7ba16f024c82f413b8a

The idea probably needs some work, so we can get the dynamic methods (_id -> _name) in the attributes as well, and somehow get hammer to dynamically fetch them in the details output.

Stephen: I like this approach a lot.

- Related to Feature #16630: Need a way to extend existing apipie specification added

#19 - 11/09/2016 08:07 AM - Ivan Necas

I think the api docs and rabl extendability are two separate issues, and therefore http://projects.theforeman.org/issues/16630 doesn't duplicate the whole issue here. Alternatively, I would suggest limiting the scope of this issue to RABL only
