

Installer - Bug #3850

Reverse dns zone not created for the entire subnet, if larger than /24

12/11/2013 08:31 AM - Dominic Cleal

Status: Resolved	
Priority: Normal	
Assignee:	
Category: Foreman modules	
Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
Description of problem: Foreman only creates reverse zone file for first set of prefixes in a multi-prefixed subnet.	
How reproducible: Everytime	
Steps to Reproduce: 1. Install Foreman in a provisioning configuration using a subnet that has multiple prefixes such as 10.1.0.0/23 2. Add a host to foreman with an ip address prefixed with 10.1.1.	
Actual results: Foreman errors with: Create Reverse DNS record for INSERT_HOSTNAME_HERE task failed with the following error: 400 Bad Request	
Additional info: Adding a host using an address prefixed with 10.1.0 works fine.	
After manually adding a reverse zone in the named configuration, adding a host to the higher prefixed addresses works.

- % Done changed from 0 to 90

Oops, forgot all about this. The code still works, but I believe Ewoud would prefer me to make the code slightly nicer.
