

Foreman - Bug #3878

Changing BMC power state results in a message which says the host is going to be in the current state instead of the target one

12/15/2013 12:05 AM - Sam Kottler

Status:	Duplicate	Fixed in Releases: Found in Releases: Red Hat JIRA:
Priority:	Normal

Description		
Right now when you have a BMC device assigned to the host and change "Power" under the BMC tab on the individual host page and choose a new state, there's a message that says "<host> is now <state>." The state field is the current state before the change, instead it should say "<host> is about to <state>" so you know the change successfully occurred.
