Description

Trying to build a VM on a VMWare CR results in this error from vSphere:

An error was received from the ESX host while powering on VM el6pupclient02.corp.follett.com.
The configuration file does not specify a guest operating system. Select a guest operating system from the General page on the Options tab of Virtual Machine Settings.

Foreman reports this error:

Unable to save

Failed to power up a compute wrxxentvsph01 (EC2) instance el6pupclient02: NotSupported: The operation is not supported on the object.

Snippet from production.log is attached.
