

Foreman - Feature #3957

Standard way of sending bad request response not tied to active record or apipie

Description

Currently in the API controllers, the only standard way I see that can lead to 400 Bad Request status is when an active record fails or Apipie::ParamError is raised.

I would like to have HttpErrors::BadRequest exception, that would have defined rescue_from as well, that can be used without connection to ActiveRecord or Apipie.
