

Foreman - Feature #3963

Restore previous page upon session timeout

01/07/2014 06:25 PM - Mike McCune

Description	
When a user's webui session times out we need to take the user back to the previous page they were using	
Katello had this feature and we lost it when moving to Foreman as our main UI container.	
Signo utilized a ?return_url= parameter, eg:	
https://foreman.example.com/signo/?return_url=https%3A%2F%2Fforeman.example.com%2Fkatello%2Fuser_session%2Fnew#/products

We are already doing this by saving the previous page users are at session[:original_uri] after clearing the session and redirecting (read carefully the order this code is executed).

1. resets current session
2. redirect to login_users_path
3. line 164, session is { :original_uri => 'whatever' }

https://github.com/foreman/foreman/blob/develop/app/controllers/application_controller.rb#L164

and then we just redirect to it on successful login:

https://github.com/foreman/foreman/blob/develop/app/controllers/users_controller.rb#L113

So I'm closing this unless this ticket meant something different I didn't understand.

- *Target version deleted (1.9.2)*

#7 - 03/28/2014 07:38 PM - Justin Sherrill

- *Status changed from Rejected to New*

Reopening as katello's URLs aren't properly redirected to. Our use of angular and hashtags mean that urls such as:

`/katello/content_views/#/content_views`
end up being redirected to:

`/katello/content_views/`

which is a blank page. We added support long ago in katello and had to do some javascript work to make it send up the 'actual' url to the server so it could redirect properly.
