Target version:	1.7.0	
Difficulty:		
Triaged:		
Bugzilla link:		
Pull request:	https://github.com/foreman/foreman/pull/1649	
Description		
A common use case is to grant users 'read-only' roles so they can login, monitor, view and audit configuration and runtime data. Katello shipped with this pre-defined role available post installation. We lost this when we moved to Foreman as the core engine and need this added along with the new permission system in Foreman.

Revision 7cb41918 - 08/15/2014 09:51 AM - Daniel Lobato Garcia

Fixes #3976 - Add all view_ permissions to viewer user role

This PR tests that there is a match between foreman access control and permissions seeded by the db script. It also checks all seeded view_ permissions are part of the viewer role.

But isn't the "Viewer" role the case?

Indeed, I think it is. I looked briefly at it and found it was missing quite a few view_* permissions, so all we probably need to do is update it. I'd even be inclined to add a test to check it has all view_* permissions so we don't let it get out of sync again.
