Fix #3985 - foreman hardhat under inner top bar.

This fix removes jQuery from the bastion productionincludes, instead relying on Foreman to include jQuery. We still include jQuery for javascript testing.

#### History

- File Screenshot from 2014-01-09 13\_19\_29.png added

##### #3 - 01/20/2014 03:05 PM - Walden Raines

The problem here is that foreman is including an older version of jQuery and then katello is including a newer version of jQuery and the two are conflicting resulting in this error:

```
Uncaught TypeError: Object [object Object] has no method 'flot_pie'
```

We could fix this bug by upgrading foreman's version of jQuery and not including it on the katello side.

However, we need to figure out how we are going to manage our assets in the future so as to prevent this problem in the future if foreman ever decides to use a library that katello is using we could end up running into this problem again.
