Description

When viewing the Foreman dashboard, obviously over HTTPS, the connection isn't considered fully secure due to HTTP elements being retrieved from within the document.

Line 167 shows:

```
<div id='dashboard' xmlns="http://www.w3.org/1999/html">
```

This is within segment (10 lines either side):

```
  </div>
</div>

             
          </div>
          <div id="title_action" class="span6">
            <div class="btn-toolbar ra">Generated at 14 Jan 10:50</div>
          </div>
        </div>

        <div id='dashboard' xmlns="http://www.w3.org/1999/html">

  <div class="row-fluid">
    <div id='status-table' class='stats-well span12'>
      <div class="span6">
        <h4 class="header">Host Configuration Status</h4>
<ul>
    <li><i class="label" style="background-color:#4572A7"> </i> <a href="/hosts?search=l
ast_report+%3E+%2235+minutes+ago%22+and+%28status.applied+%3E+0+or+status.restarted+%3E+0%29+and+%
28status.failed+%3D+0%29" class="dashboard-links">Hosts that had performed modifications without e
rror</a><h4>0</h4></li>

    <li><i class="label" style="background-color:#AA4643"> </i> <a href="/hosts?search=l
ast_report+%3E+%2235+minutes+ago%22+and+%28status.failed+%3E+0+or+status.failed_restarts+%3E+0%29+
and+status.enabled+%3D+true" class="dashboard-links">Hosts in error state</a><h4>1</h4></li>
```

This obviously causes concern within modern browsers and results in a connection that is considered insecure.

My browser details at the time of the bug are "Google Chrome Version 31.0.1650.63 m" on a Windows 7 system. This is the latest version of Google Chrome at the time of writing.

History

#1 - 01/14/2014 11:02 AM - Dominic Cleal

- Category changed from Dashboard to Web Interface

- Priority changed from High to Normal

- translation missing: en.field_release deleted (1)

#2 - 01/22/2014 03:38 PM - Stephen Benjamin

- File Screen Shot 2014-01-22 at 16.32.22.png added

- Status changed from New to Need more information

I can't reproduce this on 31.0.1650.63 on Mac OS X (don't have a Win 7 box around) -- but generally, the xml namespace URL shouldn't be considered an insecure item.

Can you go into Chrome, and click View / Developer Tools and expand the "Frames" item under Resources?

You should see the error message with the exact URL's that are triggering the message (see attached screenshot).

#3 - 02/29/2016 04:24 AM - Tomer Brisker

- Status changed from Need more information to Resolved

The xmlns url is no longer present on the dashboard.
