Katello - Bug #4067

Creating two package filter rule criteria with the same name filter breaks

01/16/2014 05:47 PM - Katello Issue Migration

Description

Steps to reproduce:

1. Create a content view definition with an filter.
2. Add an include filter package rule
3. Set name = "walrus" and version = "1.1.1"
3. Add a second line name = "walrus" and version = "1.2.3"
4. Save everything and return to the package. You'll have two package rule criteria but one will be with version = "1.2.3" and the other will be all versions.

I think this is happening because the UI identifies the rule based on the name criterion.
