Katello - Bug #4089

katello-configure on F18 appears to ignore --user-pass

01/16/2014 05:47 PM - Katello Issue Migration

Description

It would appear that katello-configure is somehow ignoring '--user-pass=' options and defaulting to the password of 'admin'.

An example is running # katello-configure --user-pass=katello

Attempting to go to https://localhost/katello/ after installation and logging in with admin/katello fails - without visual indication, but Firefox/Chrome developer consoles show that /katello/user_session returns 401 'Invalid credentials'.

Based on my testing, and jsherrill's testing on IRC, it'd appear this is isolated to Fedora 18 as we aren't seeing this on RHEL6.

An observation is that rerunning katello-configure with --reset-data=YES and --user-pass=katello, is generated a new encrypted password each time, but it appears to be encrypting 'admin' rather than 'katello'.
