Description	
<p>Currently rubygem-uglifyer is installed as part of signo (for el6 and f18) and as part of rails for el6. This isn't really needed and without it you get:</p> <p>cannot load such file -- uglifier (in /usr/share/katello/app/assets/javascripts/widgets/jquery.jeditable.helpers.js) (LoadError)</p> <p>on any page that uses jquery.jeditable.helpers.js. When uglifier is installed some files get regenerated and cached in /usr/share/katello/tmp/cache/assets/.</p> <p>Uglifier should not be needed and these cache files should not be generated. Note that in nightly no error is present because uglifier is installed (incorrectly).</p> <p>In 1.3 on f18 this is not the case and the error is present. I will fix it in 1.3 by requiring rubygem-uglifyer but the underlying problem is still there.</p> <p><i>Created: jsherrill on May 14, 2013 15:29 +00:00</i> <i>Imported from https://api.github.com/repos/Katello/katello/issues/2274</i></p>
