

Katello - Bug #4091

RHEL systems without product certificate see no Repositories

01/16/2014 05:47 PM - Katello Issue Migration

Status: Closed	
Priority: Normal	
Assignee:	
Category:	
Target version: Katello 2.0	
Difficulty:	Fixed in Releases:
Triaged: Yes	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
a) On a system, remove the product certificate: <code>mv /etc/pki/product/69.pem /tmp</code> b) register to katello to an environment that has rhel c) subscribe to rhel d) run 'yum repolist'	
Results: No repos listed Expected results: RHEL repo listed	
Moving 69.pem back into place magically makes the repos appear in yum repolist

Comment 1	
alikins_ ah, yeah, that's product required-tag stuff kicking in alikins_ those repo's require something that provides 'rhel-6-server', ala the 69.pem jsherrill ahhh jsherrill so there's no way to attach it to the rhel repo unless that cert is there alikins_ ah, true alikins_ was thinking you could, since you can with our test data repo's alikins_ but they dont have the required tags stuff jsherrill ahh alikins_ so that does make it hard to get rhel repo's if you dont have the rhel productid installed at anaconda time jsherrill yeah :/ jsherrill or if you're using an older rhel 5 alikins_ true, and not sure if the migration tool will help if you were subscribed to rhn alikins_ I'm not confident the required-tags stuff is relevant anymore, that may be something we could remove for #rhsm2013
