

Katello - Feature #4093

entitlementStatus not available via /api/systems/<ID>

01/16/2014 05:47 PM - Katello Issue Migration

Status: Resolved	
Priority: Normal	
Assignee:	
Category:	
Target version: Katello 2.0	
Difficulty:	Fixed in Releases:
Triaged: Yes	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
<p>Candlepin currently provides the entitlementStatus of a system via a call to /consumers/<ID>. However, katello does not pass entitlementStatus through when someone calls /api/systems/<ID>.</p> <p>Here is an example of what candlepin sends back:</p> <pre>```javascript { "autoheal": true, "canActivate": false, "created": "2013-05-06T12:38:24.168+0000", "entitlementCount": 1, "entitlementStatus": "valid", "environment": { "created": "2013-05-02T21:18:30.749+0000", "description": null, "environmentContent": [], "id": "3", "name": "X", "owner": { "displayname": "X", "href": "/owners/X", "id": "8a26bc8a3e671be2013e671c50410001", "key": "X", }, "updated": "2013-05-02T21:18:30.749+0000" }, "facts": { "foo": "bar" }, "guestIds": [], "href": "/consumers/efd6f653-deb8-44b2-a202-775a394f4cde", "id": "8a26bc8a3e6b879a013e79d99aa80195", "idCert": { "cert": "X", "created": "2013-05-06T12:38:24.838+0000", "id": "8a26bc8a3e6b879a013e79d99d460197", "key": "X", "serial": { "collected": false, "created": "2013-05-06T12:38:24.179+0000", "expiration": "2029-05-06T12:38:24.179+0000", "id": 8498138658074791279, "revoked": false, "serial": 8498138658074791279, "updated": "2013-05-06T12:38:24.179+0000" }, "updated": "2013-05-06T12:38:24.838+0000" } } ```</pre>	

```
},

}
...
```

Can entitlementStatus be added to the things katello sends back? This would save me from having to make an additional api call when retrieving a system.
