Katello - Feature #4099

[RFE] a way to force autoattach for all systems in an org

01/16/2014 05:47 PM - Katello Issue Migration

Pull request:			

Description

If I have an org with a bunch of systems, they will be red until I import a manifest (either via the distributor refresh or via uploading a zip file in the UI). Once I get the right subscriptions in the org, I need to do one of the following:

- wait until all the systems do a healing request (could be up to 24h)
- manually attach subscriptions for each system

Would it be possible to have a "autoattach all systems" button/link somewhere that forced an autoattach for all systems that had autoattach enabled? That way, they would become green without having to wait. It doesn't have to be synchronous, a background job would be fine.

Comment 1

Ideally there would be a candlepin API to "heal the org". This could then (optionally?) be run after every import/refresh of a manifest.

Comment 2

@Thomas McKay this is possible now in candlepin 0.8.15, via a blank POST to /candlepin/owners/owner label/entitlements

For now, the easiest thing to do might be for me to call this after my script is done. Can you add a passthrough in katello for this API, as well as a binding for it in katello-cli?

Comment 3

Is ```owner_label``` the system uuid?

Comment 4

@Og Maciel no, it is the org label (candlepin owners are katello orgs)

Note this task is schedule for Team Headpin current sprint to add to both UI and CLI (and thus API as well)

Comment 5

Awww... I did this https://github.com/omaciel/katello-cli/commit/2b7d606d97f1dc2aa422d3ddfec565189a48bc5b but can change it accordingly (WIP)
