Description As discussed on IRC we believe a good feature would be to offer a report that discovers mismatches between the facts puppet and foreman have. This would assist in the discovery of cases where machines have been manually modified or changed and foreman is unaware of the differences.

This should cover scenarios where the provisioning data has been modified (IP, MAC), and foreman learns about it via the puppet facts.

Alerts should be send to the host owner

- Branch set to feature/416-inconsistant-fact-reporter

I think the logic is good in here but maybe you do not like the gateway_if fact conversion. However I will need this.
