Description

For consistency among plugins, the Foreman package should handle creation of plugin directories for things like configuration and log files. A suggested structure is:

/var/log/foreman/plugins/<plugin_name/<log_files>
/etc/foreman/plugins/<plugin_name/<config_files>

Just the parent "plugins/" directory I assume?

This might be a good time to get settings.plugins.d/ handled in our packages, e.g. under /etc/foreman/.

We'll need a trivial patch to config/settings.rb to load stuff in subdirs. Should just be changing *.yaml to **/*.yaml.
