Pull request:	
Description we d like to have a wizard for editing class parameters of a host today we have to go to every parameter and overrid them. it would be better to have a button on the edit host leading to a dedicated window listing every parameter on the left and the corresponding value on the right, ready for overriding. this scheme would allow level-1 operators to easily customize the values of a given host. additionnally, it would be good to allows such "easy" editing through the api
