Description	
When I edit a VM in Foreman 1.4.0-1.el6, it shows both NICs are E1000 while in fact they are vmxnet3.

The same applies to the hard disk, no matter what you mark it's always set to thin provisioning (it even happens when modifying the compute profile, it always goes back to thin)

Setting this to pending. This depends on a new version of fog to be released and set for foreman to be used.
