Description per Marek's comment on PR 1105 so we find all records within specific location, the find the same for specific organization and then combine these ids which we use in third query? sounds like work for SQL instead of ruby? I understand it's not that easy using ancestry but this does not feel right to me, what do others think?		

History

#1 - 02/14/2014 02:42 PM - Dominic Cleal

- Category set to Organizations and Locations

#2 - 02/17/2014 11:35 AM - Dominic Cleal

and remove the explicit reference to the User class.

#3 - 07/28/2014 02:17 PM - Eric Helms

- Bugzilla link set to 1123965

#4 - 05/14/2015 05:05 AM - Marek Hulán

- Description updated
