Description

Right now there is a single oauth key that you can use to authenticate to Foreman. We have built a number of scripts that integrate with the Foreman REST API, and it would be nice if we could use a per-user API key to authenticate. I envision this being similar to the Jenkins "Show API Token / Change API Token" interface.

- Is duplicate of Feature #1301: Consider adding a per-user API key added

#2 - 02/13/2014 09:06 AM - Dominic Cleal

- Project changed from Installer to Foreman

- Category set to Authentication

- Status changed from New to Duplicate

I definitely agree, though I'm going to mark this as a dupe of #1301.
