Pull request:		

Description

I've installed a minimal install of cent65 added epel puppet and the foreman latest release repos.

```
[root@foreman ~]# rpm -qa | grep release
epel-release-5-4.noarch
foreman-release-1.4.1-2.el6.noarch
puppetlabs-release-6-10.noarch
centos-release-6-5.el6.centos.11.2.x86_64
```

```
[root@foreman ~]# yum install foreman-installer foreman -y
throws lots of dependency issues.
```

if I add the 1.3 release repo and get package conflicts:

Transaction Check Error:

```
file /usr/bin/ruby193-rake conflicts between attempted installs of ruby193-ruby-wrapper-0.0.2-4.el6.noarch and
ruby193-rubygem-rake-0.9.2.2-29.el6.noarch
file /usr/bin/ruby193-ruby conflicts between attempted installs of ruby193-ruby-1.9.3.327-29.el6.x86_64 and
ruby193-ruby-wrapper-0.0.2-4.el6.noarch
```

So I install just ruby 1.9

```
[root@foreman ~]# yum install ruby193-ruby -y
```

Then I can finish the foreman

```
[root@foreman ~]# yum install foreman-installer foreman -y
```

Now when I run the installer:

```
[root@foreman ~]# foreman-installer --foreman-proxy-dhcp true --foreman-proxy-dns true
I get a segmentation fault:
```

```
[ INFO 2014-02-25 16:11:42 main] /usr/lib/ruby/1.8/pathname.rb:287: [BUG] Segmentation fault
[ INFO 2014-02-25 16:11:42 main] ruby 1.8.7 (2011-06-30 patchlevel 352) [x86_64-linux]

```

History

#1 - 02/26/2014 01:55 AM - Dan Radez

Well this is me learning the hard way. After I used the centos-release-SCL repo most of this went away.

This bug can be thrown out and I'll re-file if I hit something else.

#2 - 02/26/2014 08:36 AM - Dominic Cleal

- Status changed from New to Resolved

Thanks for confirming, not sure what happened there. The segfault is filed as [#4244](#), it's an issue with Puppet 3.4 on Ruby 1.8.
