<b>Description</b> I'm trying to kickstart a machine with the foreman rpms already installed. The install halts citing that foreman has failed to install. I looked on the system at /mnt/sysimage/root/install.log and saw this error:  error: %pretrans(foreman-1.4.1-2.el6.noarch) scriptlet failed, exit status 127  I've not found any other error messages.

this link suggests that a shell may not be available at kickstart:

<http://fedoraproject.org/wiki/Packaging:Guidelines#Scriptlets>

and that %pretrans should be written in Lua:
