Revision aaf30cda - 03/19/2014 06:59 PM - Eric Helms

Fixes #4657: Removes Katello current user setting and moves consumer authentication checking to the proxies controller.

Previously, the API controller was attempting to handle authentication for standard users and consumers across all controllers. After moving all consumer routes and functionality to the Candlepin proxies controller, client authentication should be handled within the context of that controller and authentication/authorization controller relegated to the underlying Foreman framework.
