Works for me against develop. Added two smart variables to the apache puppetclass and the association shows up (and the host gets the global parameter):

```
1.8.7 :005 > LookupKey.where(:puppetclass_id => Puppetclass.find_by_name("apache")).select("key, puppetclass_id")
+-----+-----+
| key | puppetclass_id |
+-----+-----+
| baz | 60              |
| foo | 60              |
+-----+-----+
```

#3 - 03/18/2014 04:15 PM - Stephen Benjamin

In the end, I was able to reproduce the problem. The Puppetclass view uses "puppetclass.lookup_keys.empty?" and I had a poorly named counter in EnvironmentClasses that was 0 (no other params for the class).

Something to keep in mind if something weird happens like this... rails magic makes .empty? and .size look to the counter cache if it exists.
