

Katello - Feature #4707

When working with puppet modules in content views, show the origin repo (or get rid of repos)

03/19/2014 01:54 PM - Erik Jacobs

Triaged:	Yes	Found in Releases:
Bugzilla link:		Red Hat JIRA:
Pull request:		
Description <p>The new content view workflow is much improved, however there is a slight problem in that the origin repository for puppet modules is not indicated.</p> <p>If we are going to offer the ability to create multiple products/repos for puppet modules, then we should provide some mechanism to find them via that categorization in the view area.</p> <p>For example, add a (Sortable/Filterable) column to the "add module" page that displays the origin product/repo of the module. Also, add the same column to the module list page for the view.</p> <p>The alternative is to entirely re-vamp the way puppet modules are treated from a product/repo perspective. I would think adding some columns to the pages might be easier.</p>

- Status changed from New to Rejected

- Target version deleted (Katello Backlog)

Thanks for reporting this issue. This issue was created over 4 years ago and hasn't seen an update in 1 year. We are closing this in an effort to keep a realistic backlog. Please open up a new issue that includes a link to this issue if you feel this still needs to be addressed. We can then triage the

new issue and reassess.
