Description

When organisations are enabled, but not locations, you can get errors trying to resolve routes for the "other" taxonomy when editing an organisation.

```
ActionView::Template::Error (undefined method `parent_taxonomy_selected_location_path' for #<#<Cla
ss:0x000000077546d8>:0x00000007adf000>):
    5:    <%= select_f f, :parent_id, taxonomy.class.where("id NOT IN (#{taxonomy.subtree_ids.join(
',')})").order(:title), :id, :title, { :include_blank => true },
    6:                { :label => _('Parent'), :onchange => 'parent_taxonomy_changed(this);',
    7:                    :help_inline => :indicator,
    8:                    :'data-url' => parent_taxonomy_selected_location_path(taxonomy.id)
    9:                } %>
   10:
   11:    <%= text_f f, :name %>

As a workaround please enable locations too. It should be on by default IMHO.

#4 - 03/21/2014 02:41 PM - Og Maciel

~~Even with location enabled I still see this issue.~~ nm

Works fine with locations enabled here. Did you restart Foreman or Apache after changing the configuration?

#6 - 03/21/2014 03:45 PM - Lukas Zapletal

> Works fine with locations enabled here. Did you restart Foreman or Apache after changing the configuration?

Yeah the Og's one is different I think (Katello needs to be enabled for that).

can you elaborate what is the difference? do we have a different stack trace when locations are enabled?

#8 - 03/24/2014 08:58 AM - Lukas Zapletal

Sure, the one Og referred to was https://bugzilla.redhat.com/show_bug.cgi?id=1076562 I assume.

#9 - 03/25/2014 08:59 PM - Mike McCune

The issue outlined in https://bugzilla.redhat.com/show_bug.cgi?id=1076562 (moved to POST) is no longer occurring but the situation outlined in this issue still is.
