History

- *Project changed from Foreman to Katello*
- *Triaged set to No*

The JSON parse errors middleware appears to work in Foreman on an RPM installation, using ruby193-rubygem-multi_json-1.8.2-1.el6.noarch.rpm. Passing to Katello in case this is specific to the sync mechanism, no Foreman reproducer was supplied.

I'd suggest that bugs in Satellite 6 are reported to RHBZ in the first instance though.
