Description		
<p>We really shouldn't be building packages inside the 'ruby193' software collection, but instead should have our own software collection (say, 'foreman') which depends upon ruby193.</p> <p>Generally the provided SCLs aren't intended to have packages added to, or we could cause conflicts (e.g. ruby193-passenger is in RHSC 1.1 but not 1.0, yet we provide it) and it will make it much harder for us to migrate to new SCLs (e.g. ruby200 and ror40) as all of our package names change.</p> <p>Some docs on this are here: https://access.redhat.com/site/documentation/en-US/Red_Hat_Developer_Toolset/2/html-single/Software_Collections_Guide/index.html#sect-The_Software_Collections_Prefix https://access.redhat.com/site/documentation/en-US/Red_Hat_Developer_Toolset/2/html-single/Software_Collections_Guide/index.html#chap-Extending_Red_Hat_Software_Collections</p>

Started work on this in <https://github.com/domcleal/foreman-packaging/tree/rpm/develop-fmrb> modelled on ror40 (which is built on ruby200), but it'll depend on RHSC 1.1 to work for the ruby193-scl-devel package
