```

When you initially click the promote button for promoting a content view, you are presented with the lifecycle path.

The "Library" environment has a checkbox on it. When the generation of the page content is very slow, it can be very confusing because the publish action already put content into the library.

- 1) By default, when the lifecycle path is first displayed, there should be no checkboxes available.
- 2) Once the back-end finishes calculations, at that point we should update the page with a checkbox on the proper environment.
- 3) While calculations are being done on the back end, there should be a visual aid (spinner) to let you know something is happening.
