Description

Based on work on https://github.com/mtaylor/puppet-foreman_proxy_puppetssh we could make the installer able to setup ssh so we could trigger puppet run using it.

Marek, what is this about? :)

#2 - 05/19/2017 03:48 AM - Marek Hulán

- Status changed from New to Rejected

This was about introducing the linked puppet module in our installer so that it would generate SSH key and allow puppetrun on the proxy out of the box. I think there's already an alternative way through REX so we can close this.
