<b>Description</b>	
Per the V2 spec, users should be able to pass in model json with attributes for associations in order to update a model's association. See the "Many-to-One and Many-to-Many" section below: <a href="http://theforeman.org/manuals/1.4/index.html#5.1.7HandlingAssociations">http://theforeman.org/manuals/1.4/index.html#5.1.7HandlingAssociations</a>

I think Joseph had to implement some code to deal with this. It would be worth checking the foreman codebase.

Here's the example CURL:

```
$ curl -k -u admin:changeme -H "Accept: version=2,application/json" \
  -H "Content-Type: application/json" -X POST \
  -d '{"domains": [{"name": "earendil", "id": 1}, {"name": "turgon", "id": 3} ]}' \

```

Also, we need to support requests that have arrays with strings (of name or label?) for associations. I think currently we only support ids (e.g. content\_view\_ids). Can be handled separately.

Thanks for reporting this issue. This issue was created over 4 years ago and hasn't seen an update in 1 year. We are closing this in an effort to keep a realistic backlog. Please open up a new issue that includes a link to this issue if you feel this still needs to be addressed. We can then triage the new issue and reassess.
