Foreman - Feature #4927

[RFE] foreman-debug should provide a means for plugins to extend what is collected.

Description

When a plugin in installed into foreman, it also may want to add additional debug data. The foreman-debug command should support extensions from plugins.

Revision 0c93b462 - 03/31/2014 09:10 AM - Bryan Kearney

Fixes #4927 - Extend foreman-debug to look for extensions provided by plugins.

This assumes a directory called /usr/share/foreman/script/foreman-debug.d.
Any *.sh file in there is sourced. The expectation is that plugins would put
files into this locations and can add files or commands as necessary

Bryan, are you dropping katello-debug from the distribution for Sat6?

If so, this plugin can go away then: https://github.com/sosreport/sosreport/tree/master/sos/plugins/katello.py
