Description	
I have 7 puppet servers reporting to a central foreman server. The foreman server is connected on a slow link (1 Mbit) at my office.	
It would be nice to have the report and fact yaml compressed while sending them to the foreman server

I would suggest you work around this by simply doing ssh tunnel with compression enabled.

alternatively, some web servers (such as apache/nginx) knows how to decompress web requests on the fly.

#2 - 12/06/2012 11:07 AM - Benjamin Papillon

Were you able to compress the data using nginx or apache modules?

Benjamin
