<b>Description</b>		
I use the Hammer CLI at AWS in CloudFormation to bring up EC2 instances and assign them roles/environments so that they can bootstrap automatically. During the 'testing' phase of this i sometimes need to bring down and instance and bring it back up again clean. The CLI cannot currently revoke the previous cert, so I have to ssh into my Foreman box and 'puppet cert clean fqdn'. It would be nice for the CLI or the API to have this ability.

#### History

##### #1 - 04/01/2014 07:59 AM - Dominic Cleal

- Tracker changed from Bug to Feature
- Subject changed from API Does not allow certificate revocation/clean to API Does not allow Puppet certificate revocation/clean
- Category set to API
- Priority changed from High to Normal

In the meantime, you can revoke certs via the smart proxy's API rather than Foreman itself: <http://theforeman.org/projects/smart-proxy/wiki/API>
