<b>Pull request:</b>	
<b>Description</b> evaluate if it make sense to allow modification of certain fields after initial installation.  fields such as domain might not make much sense to change on a running system.  note to self, we should allow a scenario where we want to redeploy the host in a different domain.	

#### History

- Description updated

I don't think this makes sense at all. Sure, you may not want junior people to mess with stuff, but we have RBAC for that. Admins can and should be able to migrate machines to new domains, or puppetmasters, or whatever.
