<b>Description</b>	
<p>When a user creates a host group, they select a lifecycle environment and content view. Once this is done, the client will request the list of all activation keys that are associated with that combination. With the current UI, the activation keys are not being retrieved properly. The root cause appears to be that the request contains the foreman puppet environment id, instead of the katello content view id.</p>	

#### Associated revisions

##### Revision a0945ad5 - 04/01/2014 09:17 PM - Brad Buckingham

fixes #5013 - host groups - fix retrieval of activation keys

This commit fixes the behavior of hostgroup create/edit, where the user selectes a lifecycle environment and content view and in turn the list of available activation keys is return from the server.

The main issue prior to this commit was that the logic was using the foreman puppet environment id where it should have been using the katello content view id.

##### Revision b6a355a3 - 04/02/2014 12:31 PM - Brad Buckingham

Merge pull request #3935 from bbuckingham/issue-5013

fixes #5013 - host groups - fix retrieval of activation keys
