

Katello - Bug #5096

Failed repository creation is not easily corrected

04/07/2014 08:03 PM - Justin Sherrill

Status: Closed	
Priority: Normal	
Assignee: Justin Sherrill	
Category: Orchestration	
Target version: Katello 2.0	
Difficulty: hard	Fixed in Releases:
Triaged: Yes	Found in Releases:
Bugzilla link: 1116954	Red Hat JIRA:
Pull request: https://github.com/Katello/katello/pull/4456	
Description	
When trying to create a repository, if an error occurs due to some user error the dynflow process cannot be corrected.	
For example:	
Create a puppet repo with a feed url starting with 'https'	
The repository creation process will start but the dynflow task will fail when it tries to create it in pulp. Since the user cannot re-submit the task and update the feed url, he is forced to go into the rails console and delete the repository.

Revision 8c67ff53 - 07/22/2014 03:39 PM - Justin Sherrill

fixes #5096 - fail gracefully on pulp repo creation failure

The goal is to run the action creation in the plan phase and error out if its not valid. A similar approach is taken with Content Host Creation. However in that case, content hosts are not created in other situations. Repositories are created during publish/promote of content views as well and in that situation we do not want to perform pulp creation in the plan phase. As a result I have created a new action CreateImmediate that does the creation in the plan phase. It attempts to use as much from Create as possible (there is a lot of code there)
