

Katello - Bug #5098

select all boxes are global across all lists

04/07/2014 09:12 PM - Justin Sherrill

Status: Closed	
Priority: Normal	
Assignee:	
Category: Web UI	
Target version: Katello 2.0	
Difficulty:	Fixed in Releases:
Triaged: Yes	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description Currently nutupane select all boxes are global across all lists. So if you have a nutupane with a details table in the details pane, select one 'select all' box will select the other.

Revision d4b69171 - 04/14/2014 01:53 PM - Eric Helms

Fixes #5098: Table select all checkboxes no longer trigger one another.

Previously, the select all functionality was tied to the assumption that a table variable existed attached to the scope; however, this use of a table variable reflected that created by an outside controller and not the internal scope of the directive.

Changes the handling of select all internally within alch table by introducing a private variable that belongs to each instance of alch-table. Methods were introduced to wrap the internal variable to enforce the internal nature of the variable.

Revision 67095980 - 04/14/2014 05:53 PM - Eric Helms
