Description

As part of managing content in katello, it needs to also create content within foreman (e.g. install media, operating systems...etc) at the appropriate points in time (e.g. repo synchronization, content view publish & promotion).

There are a couple of issues with the current implementation that need to be addressed:
1. Do not create foreman content (install media, OS...etc) when creating a repo in the default content view (i.e. Library)
2. Do not blindly create install media, if it already exists (e.g. rather than Medium.create! do Medium.find_or_create_medium)
