

Katello - Bug #5127

Bastion modules should have an explicit dependency on the Bastion module

04/09/2014 03:14 PM - Eric Helms

Status:	Closed	
Priority:	Normal	
Assignee:	Eric Helms	
Category:	Web UI	
Target version:	Katello 2.0	
Difficulty:		Fixed in Releases:
Triaged:	Yes	Found in Releases:
Bugzilla link:		Red Hat JIRA:
Pull request:		
Description		
Upon adding manual bootstrapping, the Bastion module has become more independent and a module for centralized UI behavior. All of the modules rely on this functionality to function, but the relationship is currently implied rather than explicit.

Revision a170e75c - 04/10/2014 01:09 PM - Eric Helms

Fixes #5127: Adds explicit requires on Bastion module by all other modules.

The Bastion module serves to provide centralized cross-module functionality required by each feature module. Previously, this relationship was implied by Bastion being the top level module tied to the angular bootstrap process and the Bastion modules inclusion of all other feature modules. With the change to manually bootstrapping angular with the required modules, the Bastion module transitioned to acting like all other modules. However, without this module all feature modules wouldn't function (e.g. setting API prefix, providing functionality on the root scope). This changes adds an explicit requires to all modules that require the Bastion module to function.
