How reproducible:

Steps to Reproduce:

1. Create some content views
2. Attempt to create a composite content view; from the available content view options, select the default view alongside any others you might want to include.
3. View resulting error mesg.

Actual results:

User is told that default view cannot be added to any composites.

Expected results:

Disable selection of, and/or hide this view if it cannot be added.

This appears to be still occurring in a more subtle way, the Default is no longer shown but it appears to be select-able:

- 1) go to the Content Views tab of a Composite View
- 2) Ensure you have multiple views available
- 3) Hit the Select All checkbox to select all views
- 4) Hit "Add"
- 5) note error:

"An error occurred updating the Content View: Cannot add default content view to composite content view "
