**Description**

Hi,

it would be nice if Foreman had the ability to declare custom static facts through the GUI.

The user would be provided with a simple interface through which they can define custom facts including default value and multiple choices.

One would then be able to choose the value of a fact let's say under the host edit section, just like one would do with the environment setting. Multiple choices could be offered via a drop-drown.

Alternatively, it would be handy if the global/host parameters had a drop-down style selection with predefined choices that the user can manage through the GUI.

Regards,
Matteo

## History

**#1 - 04/15/2014 02:18 PM - Dominic Cleal**

*- Is duplicate of Feature #4127: Array, Boolean and other types support in "hostgroup parameters" added*

**#2 - 04/15/2014 02:19 PM - Dominic Cleal**

*- Status changed from New to Duplicate*

I'm marking this as a dupe of #4127, as I think the ideas mentioned there and in its related tickets would solve this for you too.
