Revision cf2e77a5 - 05/19/2014 06:34 AM - Eric Helms

Fixes #5221: Adds a helper method to allow a model instance to inquire if the instance is authorized for a particular permission.

Model instances can be asked directly if they are authorized for a particular permission by, for example, calling 'instance.authorized?(:view_model)'. This abstracts and centralizes some of the repetitiveness of having to instantiate an authorizer and pass the instance to the 'can?' method as the object of inquiry.
