Description	
<p>During the course of re-designing tupane, the bulk actions feature has revealed the need for a robust bulk action architecture. Actions that reach out to physical systems, or backend services may experience some time delay and need to be handled asynchronously with reporting to the user on status.</p> <p>Need to work with Foreman to unify on a Bulk Actions mechanism, most likely utilizing mcollective</p> <p>----</p> <p>Imported from https://trello.com/c/5foUhfzS/117-8-design-bulk-actions-architecture</p>
